I am looking for a way to get everything in this format: "TopicName" "TopicUrl" I have tried using this, but I get no results. `import re`
`df = pd.read_csv('data.csv', encoding = "utf-8")`
`for row in df:`
`topic_name = re.findall(r'(?:"|".*?)"[^"]*', row['TopicName'])`
`topic_url = re.findall(r'(?:"|".*?)"[^"]*', row['TopicUrl'])`
`print(topic_name + topic_url)`
A: `df.TopicName = df.TopicName.str.extract(r'(?:"|".*?)"[^"]*')`
`df.TopicUrl = df.TopicUrl.str.extract(r'(?:"|".*?)"[^"]*')`
`df = df.drop(["TopicName", "TopicUrl"], 1)` Output:

2d92ce491b
