A: As you have already found, the.bat and.exe files are just a user-friendly form of command line tool that is used to activate Windows. Windows 7, 8, 8.1 and 10 and XP can be activated through command line activation. You can run the command line tool through windows command line or by executing command prompt in CMD (Windows 2000, XP and later): If you don't have the.exe file, you can download it. If you still have the.bat file, you can download that too.
