Photoshop CS6 Adobe Photoshop has two versions: version CS and version CS5. A version is a collection of files that have been edited and compiled into a final image, ebook, or other creation. Photoshop CS6, for example, contains a collection of files for designing flyers, greeting cards, websites, and magazines. Depending on your version, you may have access to additional features of Photoshop. For example, versions CS and CS4 (the newest versions) have a feature called Content Aware Fill (discussed in Chapter 11), which automatically fills in areas of image that match the color and content of adjacent areas. The features of this version of Photoshop are discussed in greater detail in Chapter 11. Perhaps the greatest appeal of Photoshop is its potential for image manipulation. When you turn images into digital negatives, you can apply subtle manipulations to them to produce a whole new range of images.

The social media giant is trying to expand into Africa with the help of the colonial legacy. “Africa was, and probably still is, a vast and mysterious land that the colonisers found too forbidding to explore. And the continent’s governments were too weak to do anything about it. Now it seems Facebook is trying to find a way to bypass Africa’s political problems and instead ride the geo-political power of the remaining colonial powers, and the warm afterglow of colonialism. If Facebook is able to use the colonial powers of the past to help it grow into more territories across the continent, it could be a valuable tool in Africa’s development. However, it is important to keep Africa’s problems in context.

Facebook’s entry into Africa is fraught with deep and complex history. When Facebook entered Asia in late 2009, it was competing with other social media services like Myspace, Orkut, and other Asian social networks. By contrast, the social media platforms that are operating in Africa are a blend of the existing colonial powers, which are still exploiting many of their former colonies. This reality leaves Facebook with a complex task in Africa, but the social media giant may be willing to compromise on some of its strategy in the continent if they can make it work. How Facebook Is Entering Africa Africa is an enormous continent and is

---

heavily populated by many different nations and tribes. The social media giant is making efforts to connect all of them together by creating more features for African users. Facebook has created a special page to help people in Africa learn about Africa and its culture and current issues. This feature focuses on explaining the different ways that Africans celebrate and show emotions like joy or anger. This page also explains how to show affection to other tribes in Africa. The company has also released a feature called “build your village,” which lets people connect to like-minded friends around the continent. Through this feature, users can connect and plan events together to bring about new developments in their community. Facebook is also working to create social networks for the more than 1.3 billion Africans. A study conducted by Facebook showed that more than 200 million people are already accessing the social media platform every month. The second largest audience for Facebook comes from East Africa, which includes countries like Kenya and Tanzania. The site is also being used in some other parts of the continent, such as in Nigeria and South Africa. The company is

[Sparse pattern analysis of the color Doppler waveform]. Recent researches and reports on color Doppler ultrasound have clarified the definite characteristics of the blood flow such

as pulsation and continuity. These phenomena are analyzed mainly by means of the nonstationary time-series analysis. The object of this study is to present the use of the sparse time-series analysis for the analysis of the color Doppler ultrasound, especially the waveform. We applied the algorithm of the sparse time-series analysis to the color Doppler ultrasound waveform obtained from 27 normal volunteers and the ones from 20 patients with tumors of various sites. Based on the nonstationary time-series analysis, we analyzed the characteristic of the sparse pattern in the waveform of color Doppler ultrasound. For the analysis of the characteristic of the sparse pattern, we proposed a novel feature named sparse-pattern-amplitude (SPA). By the SPA, we extracted the frequency-dependent variation of the amplitude of the sparse waveform. In this study, we demonstrated that the SPA represents the local features of the waveform, and that the SPA is useful for the detection of the features of blood flow in the tissue. The SPA is a new tool in the analysis of the color Doppler waveform of ultrasound.

Resistive random access memory (RRAM) can be used as an electric non-volatile memory. Resistive non-volatile memories of resistive random access memories have resistive elements with programmable resistive values, for example “on” state or “off” state of the memory cells. Some resistive non-volatile memory elements have a resistive cell structure with a top electrode, a bottom electrode, and a

resistive layer between the top electrode and the bottom electrode. The resistive value of a resistive cell may be programmed by applying a voltage difference between the top electrode and the bottom electrode and applying a program current through the resistive cell. The resistive value can be detected by applying a read voltage to the top electrode and the bottom electrode. The present invention relates to a hinging appliance, such as for example, a patio door, of the type comprising a base frame provided with a horizontal axis and a vertical axis, and two vertical hinged panels that are hinged at the ends thereof to the base frame and the panel is hinged at the middle of a longitudinal edge thereof to the base frame. For the closure of the hinged
