Q: Why is a variable hidden within a list property accessed only in code? I have a property on a domain object that allows for a list of strings to be added: public List List { get { return m_List; } } When I call Add on this property I do it like this: var MyObj = new Object1{ }; List ListOfStrings = new List(); //Lots of other stuff. MyObj.List.Add(ListOfStrings); The issue I'm having is that I need to access the ListOfStrings property by iterating though the List, like this: foreach (var item in MyObj.List) { //Do stuff } This code won't compile due to: Cannot apply indexing with [] to an expression of type List because it is a type of list I know that I can easily access the ListOfStrings property by calling it off MyObj.List[0],
