Symbol Converter is a multi-purpose program that can help you change and format files to

---

modern format. This multifunctional software converts almost all file formats, and it supports very large files with ease.

For example, this program can convert all file formats including PDF, PPT, DOCX, xls,

---

etc. You don't need to be an expert in file formats to use this software.

Symbol Converter supports both the English and the Arabic languages. This freeware application is supported by the trial license for 30 days, but

---

you can extend this time up to 90 days. In addition, this program can automatically convert to modern formats, such as PDF, DWG, DGN, XPS, DXF, DTP, EPS, JPG, TIFF, and WMF. The output files are

---

compatible with Windows systems, Mac, and Linux platforms. The output formats include JPEG, TIFF, PDF, etc. You can also choose to convert files without losing their original data. This application can maintain

---

the original form of the data, and it can help you save precious time. You can use this tool to print images, create reports, spreadsheets, design presentations, create and save documents, e-books, create websites, and draw

---

maps. With this software, you can convert any document or image into various modern file formats. The program supports all the document formats, including PPT, DOC, RTF, etc. You can also convert any image

---

into many formats.  
Another advantage is that you can convert multiple files at once. This software also includes a built-in scheduler. You can set a time for conversion. You can also schedule this application

---

to run in the background  
to keep your PC faster.  
You don't need to worry  
about how to convert your  
file; just choose your  
favorite output format,  
select file extension, and  
click the Convert button.  
To use this software, you

---

need to install the program. When it's installed, you can go to the program icon and choose the conversion mode and format you need. To use the built-in scheduler, you need to create a task. The

March 22, 2009 The PDF File Manager supports file conversion for a wide variety of PDF documents, including DjVu, PCX, TIFF, CBR, CBZ, DCX, and even A4.

---

This program was developed by Rambler Software, a company who specializes in optimizing PDF documents. The software is lightweight and offers a simple and easy-to-use interface. Simply open your PDF

---

document, select the files to be converted, press the button and let the conversion take place.

The program uses a small amount of system resources and didn't pop up any errors during our tests. The only limitation

---

is that the application doesn't support batch conversion and doesn't have an option for cutting or pasting multiple pages at once. The program offers the following features: Create PDF files from several types of files

---

Support for drag-and-drop functionality  
View current and previous pages in PDF documents  
Open multiple documents at the same time  
Create PDF files from DjVu, CBR, CBZ, DCX, TIFF, PCX and A4 documents

---

Support for Acrobat  
Reader 6, 7 and 8 Save  
file as or send file via  
email Password  
protection Create PDF  
files directly from the  
Windows clipboard  
Create PDF files from up  
to 16 different files

---

Support for "cut" and  
"copy" operations  
Compare PDF files side  
by side Import, export  
and remove PDF meta  
information Support for  
password protected  
documents Open and  
close documents Sort files

---

by name Extract text and  
tables Adjust PDF text  
and graphics Select a  
background color, paper  
type and page orientation  
Adjust resolution,  
orientation,  
magnification, scale and  
more Create PDF files

---

from a wide range of formats User interface of the program is quite simple. You can launch it either from Windows or Mac and use the "Open" dialog to access your files. To start converting, you only need to press the

---

"Convert" button. The application supports many common file formats including DjVu, PCX, TIFF, CBR, CBZ, DCX and A4 files.

Unfortunately, the program lacks a help file and batch conversion is

---

not supported. It is also worth noting that the program doesn't open documents from many applications, including Microsoft Office 2007, and is incompatible with Microsoft's PDF utility. The bottom line is that

What's New in the STDU Converter?

STUD Converter (short for Standardized Unit Converter) is a small tool that lets you easily and quickly convert a number of file types to the PDF

---

format. The tool supports the DjVu, TIFF, CBR, CBZ, DCX and PCX formats. The application interface is simple and easy to use: you can either double-click the executable file or open the program's main

---

window via the desktop menu. Once you have selected your desired source and destination, you need to enter the file extension you want to convert to the PDF format. This step is rather easy since the program

---

automatically displays the list of file extensions. You can simply select a single file or a whole folder of files and, before pressing the "Convert" button, you can edit the application's settings and set the document properties. The

---

user interface includes a number of useful options such as a small list of available file types, a change of file encoding, navigator, page layout, magnification, type of navigation, page selection, orientation, image

---

rotation, black and white data, color data, print quality, magnification, etc. You can also easily select a particular page of the source file you want to convert, calculate the page margins, set the page angle, resolution,

---

brightness, contrast and gamma, as well as view and edit the page's color scheme, color, type of navigation and color navigation. On top of that, you can select to convert a number of pages from the source document to the

---

PDF format, remove a page from conversion, as well as cut, copy and paste pages. You can also calculate the pages from the source file that you want to convert. You can add document outlines to them, set their colors,

---

type of navigation,  
magnification, page angle,  
resolution, brightness,  
contrast and gamma.

Lastly, the program also  
uses a small amount of  
system resources. The  
application didn't pop up  
any errors during our
