I created a script that will jailbreak the auto rob feature of roblox. I have it working on windows and mac. . Category: CrowdfundingQ: How to use update using variable variables in MySQL In MySQL I am trying to update a table that is using variable variables. The statement is set @variable1=9892; set @variable2=5321; set @variable3=asd; update table set var1=@variable1, var2=@variable2, var3=@variable3 where var3='asd'; I have used exec(), and I am getting an error. But if I use set @variable1=9892; set @variable2=5321; set @variable3=asd; update table set var1=@variable1, var2=@variable2, var3=@variable3 where var3='asd'; I am getting no error. Is this normal? How can I make it work using exec()? A: If you are using MySQL 5.7 or greater, the correct way of doing this is by using table-valued variables: set @table_var := (select * from some_table) set @variable1=9892; set @variable2=53
