
Ncstudiocncsoftware32

May 15, 2018 - PCI Port: Minimum 1 port is required to connect the PCI motion card that will control the CNC. OS: Windows XP SP3 (32-bit). I recommend pure original. Server: Two network interfaces are required, one for the controller and one for communication with the software. I recommend pure original. Software: PCI motion controller software, version 0.9. The CNC needs two PCI interfaces to work properly. The PCI controller (PICC-010) must be used to receive data from the controller. It connects to a PC using two network interfaces. The PCI controller must be installed on the PC, not on the machine.
