avenement du roi sorcier crack 2.01 avenement du roi sorcier crack avenement du roi sorcier crack 2.01Q:
Pentaho workflow-sql-execute fails with "cannot convert from java.lang.String to org.pentaho.di.core.ResultRow" I'm having a issue with SQL execute in Pentaho step element. I got the following error: Error during step SQL_Execute: Executing SQL: SELECT * FROM SCHEMA.table WHERE ROW (columns) =? [Errors] java.sql.SQLException: Cannot convert from java.lang.String to org.pentaho.di.core.ResultRow This is apparently because Pentaho needs to convert the string in some way, yet I've never been able to work out how to do this. (Any information would be much appreciated) I have checked all the suggestions in How to convert Java String to P-SQL type string in PDI and many others around SO and off SO but they don't seem to have worked for me. Any help would be appreciated, Dan A: I found out that you can use Java.toString() on the returned row. Q: Can you use abilities from other sourcebooks to make a creature you build look more monstrous? In other questions here, we've learned that you can't copy certain rules from different books, even if they don't have any wording that says so explicitly. In Pathfinder, can you use abilities from other sourcebooks to make a creature you build look more monstrous? I'm mainly interested in the following rules: You can transform a creature that has no special type Does this include creating a creature with a completely different set of rules or are you limited to transforming the already existing creature? A CR is a number that tells you how tough a creature is. Creatures that are stronger than others have a higher CR than ones that are weaker. A creature's type also affects its CR. Can you include information from a different book to make a creature look more monstrous? I'm not necessarily trying to build a monster of a different type (like an Ogre with Intelligence 4). A: While you can not use elements from another
