According to the YouTube description of the video, the person that committed the prank is a girl. In the video, a girl says she got the call from the prankster, who claimed to be a guy, and gave her details about the incident. The girl, who goes by the name "princess" in the video, said she called the friend who was in a car accident. She said he was unconscious and his chest and neck were injured. She said he was bleeding a lot and his phone was broken. This prankster also asked her to call his own phone number. It appears the girl who received the prank phone call was a friend of the car accident victim. The same prank happened to this girl's friend in Boston too. Contact The person who committed the prank said that the phone call number was the girl's mobile phone number, but after the girl hung up on the prankster, he called her again and this time left a message. The girl called the same number back and explained that the number was not her mobile phone number. The prankster then asked her to call the number of the owner of the number and the girl did. "The prankster was very polite and nice and tried to trick me into thinking it was [my friend's] car accident, but it was actually a guy who got into a huge fight with his brother," the girl said in the video. "He picked up a phone and I called and said [yelling]: 'I'm at the place of the accident, your friend is injured and his phone is broken.'" The prankster allegedly replied: "No problem." But when the girl hung up, he called back and said: "I'm at the place of the accident. Your friend is injured and his phone is broken. Call me." "So I called back and he said: 'My friend is okay, it's just a prank, call me back.'" The girl then confirmed that the number was the prankster's and hung up. Do you think this phone call prank was real?Analyses of historical pollen assemblages in the French Aquitaine region. The pollen paleoenvironmental record was studied in the French Aquitaine region using a combination of the chronology and quantitative approaches. The pollen records correspond to the last 300 kyr prior to the present. We were able to extend the pollen record up to 350 kyr before present, which includes the
