The Adobe Creative Suite The Adobe Creative Suite is the umbrella term for the latest versions of Adobe programs that deal with graphics work. These programs include not only Photoshop but also Adobe Fireworks (which is often bundled with Photoshop, or even InDesign), Adobe Dreamweaver, Illustrator, and Flash. Many of the programs in this group are integrated and work together, and the interaction among these programs and the functionality they share is quite seamless. You can use any or all of the programs in this group to create a document or site. I use Adobe Dreamweaver for Web design, Adobe InDesign for layout and print, and Photoshop for retouching and image editing — and I've found that the functionality in these programs work well for me and my clientele. To get started with this suite, you need to purchase a box of programs for either a single use or a perpetual license. The programs come in varying combinations with different costs. You can buy the Creative Suite for anywhere from \$699 to \$1,899, depending on which version you select and the number of programs you buy. Adobe Certified Online Learning Adobe has many tutorials available online, as well as DVDs that teach all of the programs in the Creative Suite. (The full box set of products is often distributed through Creative Alliance, which offers Creative Suite as one of

The workflow involves opening an image, adding effects, editing color and layers, and then saving the file. The file is saved to the computer or to an external storage, which can be viewed on any computer that has a compatible program. Things to Consider Before Using Photoshop Elements Elements automatically saves any edits to a separate file before you click the Save button. Since your last action is not always the one you want, it's important to check the name and location of the original file before you start. This way, you won't run out of disk

space or accidentally overwrite an important file. 1. Make Sure the Original Is Saved to the Right Place To ensure that your edits and changes will be saved as a separate file, check the name and location of your original file to make sure that the file is saved to the right place. If the name is changing all the time, you probably need to change the location. Click File > Save As. In the dialog box, name the file and change the location. In most cases, you need to save the original to the same folder as the edit file. 2. Save the Original Before Editing It may be difficult to find the original, especially if the file is named differently each time you edit it. You will need to save the original before you edit it. Click File > Save. Saves the original file to the current location. 3. Double-Click to Open a File Your file opens automatically. When you double-click a file, you will not be asked to name the file or change its location. If you want to change the name of the file, change the name in the Save As window instead. 4. Name the File When Saving When you save your file, the naming system remembers what you named the file. This makes it easy to find an image when you download it from a source you have saved. Click File > Save, or press Ctrl+S. You can now use the File > Save As... command to save to your file system. 5. Use the Organizer to Find Your Files Elements includes a file organizer, which lets you keep track of all the files in your hard drive. You can create folders for different projects, and then sort the folders by size. This helps you 388ed7b0c7

Impact of breast cancer molecular subtypes on de novo acute kidney injury after administration of neoadjuvant chemotherapy with fluorouracil, anthracycline, and cyclophosphamide followed by total mastectomy. Chemotherapy-induced nephrotoxicity contributes to morbidity and mortality in women with breast cancer. Breast cancers are classified into molecular subtypes in terms of hormone receptors, estrogen, and progesterone, HER2, and Ki67. We performed a retrospective study to determine the potential of breast cancer subtypes to predict de novo acute kidney injury (AKI). We enrolled 992 patients who underwent neoadjuvant chemotherapy with fluorouracil, anthracycline, and cyclophosphamide (FAC), followed by total mastectomy. Of the 992 patients, 104 (10.4%) had de novo AKI, and the subtype distributions were luminal (Lum-A), 46; HER2, 24; triple negative (TN), 18; Lum-B, 13; and unknown, 20. Patients with TN (odds ratio [OR], 3.8; 95% confidence interval [CI], 1.2-11.8; $p = 0.02$) and Lum-B (OR, 3.9; 95% CI, 1.2-12.6; $p = 0.02$) had a higher risk of de novo AKI than patients with Lum-A or HER2. Chemotherapy regimens including paclitaxel or doxorubicin in patients with TN and patients treated with epirubicin and cyclophosphamide in patients with Lum-B were independent predictors of AKI. Moreover, the median nadir serum creatinine levels were significantly higher in the patients with de novo AKI than in the patients without AKI. Patients with TN and Lum-B had a greater risk of de novo AKI than patients with Lum-A or HER2, and the potential benefit of neoadjuvant paclitaxel or doxorubicin for neoadjuvant chemotherapy in patients with TN or patients treated with epirubicin and cyclophosphamide in patients with Lum-B might be limited.
